This presentation will focus on a multi-stakeholder network of renewable energy co-operatives in the Colorado solar energy industry and the lessons it offers for scaling renewable energy co-operatives. The network, consisting of five cooperative entities, has successfully promoted co-operative development and access to capital through stakeholder collaboration and innovative business models. The presentation will highlight the importance of strategic partnerships, stakeholder collaboration, and creative business models in scaling renewable energy co-operative enterprises. Attendees will gain insights into how renewable energy co-operatives can leverage the power of collaboration and networking to overcome challenges to scaling, such as capital access and regulatory barriers. As the renewable energy sector continues to grow globally, the presentation will provide valuable lessons for co-operatives in this industry in Canada and beyond.
